Title: "Library Resources for Research: Science"	

Triway High School

Media Specialist: Roxanne Hammer

Teacher: Jennifer Farrar

The Media Specialist Roxanne Hammer and the High School Integrated Science teacher Jennifer Farrar collaborated and presented three physical science lessons. Our lessons with the students were very successful in improving the informational literacy skills of students. The students described the chemical and physical properties of various substances. They researched the physical and chemical properties of one element from the periodic table and design a superhero to represent it. Our ninth grade students prepared a written follow-up report detailing the planning, implementation, and results of the information literacy instruction proposed in the original grant application. The library resource books that we purchased from the grant can be reviewed at this website along with our lessons. http://www.tccsa.net/library_resources/scienceilile.htm

All that knowledge, all that learning, all that achievement, is now at the tip of our students fingers, in our library. The new science resources that we received through the grant are a great addition to our library. Books are the perfect technology. After our collaborative lessons we had an inservice with our teachers. We explained how much fun it is to complete collaborative lessons. We also let the teachers see the library resources that we purchased with our grant.
